

Everything You Need for eDiscovery and Nothing You Don't

Today's legal teams are under significant pressure to do more with less. Despite this growing demand, eDiscovery remains one of the most expensive and inflexible parts of the litigation lifecycle. Increasing risk, pressure on fees, greater scrutiny and increasing data volumes are matched with tighter budgets and heightened expectations.

Yet traditional discovery costs remain unpredictable, making it difficult to plan, recover costs, or maintain control as matters evolve.

It doesn't have to be this way.

- » What if cost was predictable?
- » What if insights came earlier?
- » What if your team stayed in control?

Discovery as a Service (DaaS): A Model Built for Ongoing Demand

TCDI's Discovery as a Service (DaaS) enables law firms and corporate legal teams to operate with the discovery capability of a large-scale provider without the unpredictability or overhead of traditional models.

Our custom, fixed-price DaaS approach gives teams certainty from the outset, aligning scope and approach to the specific needs of each matter.

This enables more informed decision-making, protects credibility with stakeholders and allows legal teams to focus on strategy rather than managing cost exposure.

DaaS is designed for teams managing:

-  **Multiple active disputes or investigations**
-  **Recurring regulatory and advisory matters**
-  **Unpredictable and variable data volumes**
-  **Client pressure for budget certainty and controlled spend**
-  **Internal limitations on specialist discovery headcount**

Rather than purchasing discovery in fragmented phases, clients access an integrated monthly service aligned to real litigation and investigation workflows.

What DaaS Includes:

TCDI provides a full end-to-end service, offering you the latest technology and experienced, expert resources, all for a single fixed rate, providing everything required to run discovery efficiently and defensibly.

GenAI-Enabled Data Processing and Insight

- » Rapid processing of structured and unstructured datasets
- » Automated enrichment and prioritisation to accelerate downstream review
- » Early identification of key custodians, themes and high-risk content
- » Reduction in avoidable review volume through intelligent analysis

Early Case Assessment and Analytics

- » Fast visibility into the factual shape and scale of a matter
- » Analytics-driven decision making before review costs accumulate
- » Clear reporting to support legal strategy, settlement posture and scope control

Hosting and Matter Infrastructure

- » Secure, scalable hosting delivered from the UK
- » Stable environment for multi-matter portfolios without variable hosting spikes
- » Defensible access controls and audit-ready workspace management

Expert Project and Integrated Case Management

- » Dedicated discovery leadership embedded into delivery
- » Proven operational workflows aligned to court and regulatory expectations
- » Consistent case ownership from data intake through production
- » Reduced dependency on fragmented vendors and ad hoc resourcing

Production and Defensible Output

- » Controlled production workflows with full chain-of-custody documentation
- » Repeatable processes designed to reduce procedural risk under deadline
- » Support across disclosure, investigation and regulatory response contexts

UK-Based Delivery and Hosting

Delivered and supported through TCDI's UK-based operations, providing:

- » Local service continuity
- » Alignment with UK and EU data handling expectations
- » Practical support for cross-border and jurisdictional matters
- » Confidence in infrastructure and governance close to the client environment

DaaS Benefits

Platform Agnostic Technology and Accountable Delivery

TCDI's service delivery is platform agnostic, meaning that we work with clients and their preferred technology ecosystem, where appropriate, giving clients flexibility without sacrificing control.

Cost Predictability

Fixed monthly pricing enables budgeting with confidence, avoiding matter volatility and invoice surprises.

Speed to Execution

Integrated delivery reduces delay between collection, processing, review readiness and production.

Reduced Risk Exposure

Standardised workflows, governance and UK-based oversight reduce process breakdown under time pressure.

Scalable Capability Without Building Internal Teams

Clients gain immediate access to specialist discovery expertise without permanent operational expansion.

A Model Designed for Repeatable Demand

Particularly suited to firms and corporations managing a steady cadence of disputes, investigations or regulatory response.
